**A DUAL ATTACK** against  
*mixed, resistant and unidentified infections*

In a single injection, Crystamycin delivers the swift, decisive attack of two *bactericidal* antibiotics—sodium penicillin (in massive strength) and streptomycin. This dose of penicillin produces a high destructive level both in the blood and tissues . . . and such levels persist in the inflamed tissues long after they disappear from the blood. Both antibiotics, moreover, act in synergy and, by reinforcing each other's striking power, overcome infections unresponsive to either penicillin or streptomycin alone—typically, urinary tract infections, peritonitis, infected wounds and infections of the respiratory tract. Another important point—their *simultaneous* use markedly reduces the rise of bacterial resistance. A "single dose daily" usually suffices . . . save in exceptional cases.

# INTRAMUSCULAR IRON

## Widespread Acceptance...

"The iron given parenterally was absorbed from the intramuscular site and utilised."<sup>1</sup>

"Utilisation for haemoglobin production was extremely good."<sup>2</sup>

"In every patient a satisfactory rise in the haemoglobin took place."<sup>3</sup>

"... all the patients in the series developed a vigorous sense of well-being which contrasted very strikingly with their previous chronic ill-health."<sup>3</sup>

"From the present series it appears that this new iron-dextran complex is a notable advance in the treatment of the iron-deficiency of pregnancy."<sup>4</sup>

1. LANCET, 1954, 2, 942. 3. B.M.J., 1954, 2, 1255.  
2. B.M.J., 1954, 2, 1257. 4. LANCET, 1954, 2, 1245.

### IMFERON IS THE FIRST EFFECTIVE IRON PREPARATION FOR INTRAMUSCULAR INJECTION.

IT PROVIDES the rapid, reliable response of an order hitherto only obtainable with intravenous preparations; and it takes much less time to administer.

IMFERON is indicated for the patient who is refractory to, or intolerant of, oral iron; and when a rapid response is required, as in anaemia of pregnancy.

### TECHNIQUE.

"IT WAS OBVIOUS during this study that the skill and care of the person giving the injection does much to minimise the local discomfort and staining, and it is significant that only two patients failed to attend for further injections."

(LANCET, 1954, 2, 1245).

# TOXAEMIA OF PREGNANCY

THIS WOMAN is suffering from toxæmia of pregnancy. Oedema has made the wedding ring difficult to remove. A clear case for 10% salt-free *Dextraven*, the optimal fraction dextran.

DEXTRAVEN reduces the oedema, promotes diuresis. These effects, together with a lowered blood pressure, were particularly observed in a series of cases treated with 10% salt-free dextran.<sup>1</sup>

DEXTRAVEN is stable indefinitely under all climatic conditions—no special storage precautions are necessary.

10% SALT-FREE DEXTRAVEN is also recommended for the treatment of nephrotic syndrome.<sup>2</sup>

FULLY DESCRIPTIVE literature is available and a Technical Information Service is always at your disposal.

## **Perfect Cast —after 3 weeks' hard wear !**

THE BANK MANAGER of a small Essex town fell and suffered a Colles fracture. Here is the Gypsona cast which was removed three weeks later. The thin, even formation is a characteristic of a Gypsona cast. This thin, light cast is made possible by the high plaster content of Gypsona which gives exceptional strength and makes it the most economical plaster of Paris bandage.

The clean, porcelain-like appearance of the cast, still intact after three weeks' wear, is further evidence of the quality of the fine ground Gypsum and the high plaster content of this remarkable bandage.

## DOUBLE- BARRELLED

THE value of combining penicillin with 'Sulphamezathine' in the treatment of serious bacterial infections has been confirmed by clinical experience — 'Sulmezil' now enables this to be done in the simplest and most convenient way.

### THE ADVANTAGES OF 'SULMEZIL'

- Enhanced antibacterial effect
- Active against a wide range of organisms
- Especially useful in mixed infections
- Resistant bacteria less likely to occur
- Minimum risk of toxic side-effects
- Maximum convenience

'SULMEZIL' ORAL SUSPENSION contains 0.5 gramme 'Sulphamezathine' Sulphadimidine B.P. and 150,000 units 'Dibencil' benzathine penicillin, in each fluid drachm (3.5 c.c.) Ready for use, the Suspension is pleasantly flavoured, and free from the characteristic taste of either penicillin or sulphonamide. It is therefore particularly suitable for children. 'SULMEZIL' TABLETS are also available, containing the same dosage.

Leadership in oral-iron therapy

# FERROMYN

*(Ferrous Succinate)*

## THE NEW ORGANIC IRON

FERROMYN is an original and logical approach to the problem of iron absorption and utilisation in the treatment of hypochromic anæmias. FERROMYN brings oral iron therapy a step nearer the ideal.

This new preparation presents Ferrous Succinate and exhibits the following advantages over all other forms of oral iron therapy:

1. **Highest utilisation ( $42\% \pm 5\%$ ) ensuring quickest restoration of Hb. values. It is significant to note that the utilisation factor for FERROMYN is 50% greater than that obtained with contemporary preparations.**
2. **In the recommended dosage of two tablets t.d.s. there is no evidence of intolerance or other gastric reaction.**

*Ferromyn is presented in tablet and liquid form:-*
